FORMED ROOFING AND SIDING

SINGLE AND DOUBLE PICKLED SHEETS,

FURNITURE, AUTOMOBILE AND DEEP

DRAWING STOCK, ETC.

TABLES

THE tables given in this booklet cover all thicknesses of sheets and plates from thirty gauge to two inches and all widths from eight to one hundred and twenty inches. They enable the user to quickly determine the theoretical weight of any sheet or plate of known dimensions.

Heretofore it has been necessary, when computing weights, to first ascertain the number of square feet in a given sheet and multiply it by the weight per square foot, requiring two calculations.

With these tables it is merely necessary to multiply the length of sheet or plate in inches by the number shown in the table opposite the corresponding gauge or thickness and width and the result is the correct theoretical weight.

Example: To determine the weight of a galvanized sheet, 22 gauge, 24½ inches x 116 inches. The number in the table opposite 22 gauge and 24½ inches wide is .2392. .2392 x 116 = 27.472, the exact weight of sheet.

The example given for finding the weight of a Galvanized Sheet also illustrates the method of using these tables for either Black and Blue Annealed Sheets or Plates.
